Federal Communications Commission
Office of the Secretary

To Whom it may concern,

I am very much in support of docket RM 7869. I feel weak signal work is very important to the future of amateur radio in the sense that many new technologies to further communications in all aspects could evolve from amateur experimentation in this area.

Perhaps the over crowding repeater situation could be approached in a different way. If amateurs would utilize some of the other frequency privileges they already have. Guide lines have to be drawn somewhere, that's why we have our band plans.

Sincerely,

William J. Porter
